

## ABSTRACT OF THE DISCLOSURE

A disposable garment having a side elastomeric material and a waist elastomeric material is disclosed. The disposable garment has a front region, a back region, a crotch region between the front region and the back region. The disposable garment comprises a chassis, a waist elastomeric material, a side elastomeric material, and seams. The chassis has a topsheet, a backsheet joined with the topsheet, and an absorbent core interposed between the topsheet and the backsheet. The chassis has a central panel having a waist edge and side edges, an ear panel having a waist edge, and a waistband panel in the front region and the back region. The ear panel extends laterally outwardly from each side edge of the central panel. The waistband panel extends longitudinally outwardly from the waist edge of the central panel and the waist edge of the ear panel. The waist elastomeric material is joined to and extending continuously along the waistband panels in the front region and the back region so as to form a continuous extensible waistband in the front region and the back region. The side elastomeric material is joined to the ear panel so as to form extensible ears. The side elastomeric material and the waist elastomeric material are separate elements and are disposed so as not to overlap to each other. The seams join each ear panel to a corresponding portion in the ear panel so as to form two leg openings and a waist opening such that the extensible waistbands form a continuous extensible waist feature.
